

# Path Syntax Reference

## Root and Basic navigation

Syntax	Example	Meaning
\$	\$	Refers to the entire Json
(empty)	""	Same as \$ (root)
Field	name	Access a top-level field
a.b.c	data.user.id	Navigate nested fields

## Array Access

Syntax	Example	Meaning
Field[index]	Pages[0]	Move to that array index
\$(index)	\$(0)	Access root array element

### Note:

#### Root-level array paths

When the JSON root is an array, paths may start directly with [index], [\*], or [key=value].

## Wildcards (multiple elements)

Syntax	Example	Meaning
[*]	users[*]	Select all elements in an array
a[*].b	users[*].email	Get same field from all items

## Filters

Syntax	Example	Meaning
[key=value]	users[id=10]	Select the item where value matches
[key="value"]	products[type="phone"]	String comparison
